

# Snap with more intelligence.

***ST is on the cutting edge of the digital technology that's behind everything from a family snapshot to mobile imaging.***

Millions of images are clearer, faster and less expensive thanks to the ST chips found in digital, desktop, PDA and biometric cameras. Our chips are also in the newest generation of ink-jet printers. And we're working to perfect the technology for even more sophisticated imaging products.

More reason than ever to smile and say "Arghhh!!!"

***We put more intelligence into everything.***

STMicroelectronics (formerly SGS-THOMSON) • [www.st.com](http://www.st.com) • A world leader in semiconductors for consumer products, automotive, telecommunications, computer peripherals, industrial automation and control systems • For opportunities: <http://jobs.st.com>
